

## MEDICAL TOURISM IN TLV

The Tel Aviv Sourasky (Ichilov) Medical Center is a public-sector healthcare facility and treats patients from all over the world

\* The Tel Aviv Sourasky (Ichilov) Medical Center is a public-sector healthcare facility and treats patients from all over the world. Why choose Ichilov? Israel's healthcare is world-renowned for its personalized approach to every patient. The Tel Aviv Sourasky (Ichilov) Medical Center is a public-sector healthcare facility and treats patients from all over the world, providing highly professional medical care and consultation to thousands of patients, adults and pediatric on both an inpatient and outpatient basis. We are constantly upgrading our facilities to make sure they feature state-of-the-art technologies, from cutting-edge diagnostic tests to the most advanced laboratory methods. Before arriving, we request that prospective patients send us the results of diagnostic tests done at home so that our doctors can review them and make a personalized examination and treatment

plan. This will help avoid repeated testing upon arrival, saving you precious time and money. A cost estimate will be provided in advance to give you an approximation of the expected treatment costs. We have Russian-speaking and English-speaking designated coordinators who will accompany you every step of the way, from arrival to discharge. At the end of your stay at our hospital, you will receive all of your test results, in English or in Russian, at no extra charge. Your treatment coordinator and our medical staff will be happy to answer your questions regarding further recovery and follow-up. For more information visit <https://ichilov-clinic.gov.il/> or email us at [medtour@tlvmc.gov.il](mailto:medtour@tlvmc.gov.il)

## MY EXPERIENCE

\* I'm Semen Smirnov, 34 years old. On the October, 8 2022 the MRI with contrast of the kidney detected a kidney tumor. I decided to avoid any risk of unsuccessful treatment and contacted the International Department of Tel Aviv Sourasky Medical Center. On 24 October I started the examination, just after 3 days of examination doctor Avi Bary consultation took place. Doctor explained me all the details of my situation with various ways of treatment and I chose to have the surgery of the partial nephrectomy by DaVinci

robot. The operation was scheduled for 4 November. All the time during my stay in Tel Aviv the major consultant of the International Department has been extremely helpful to me in all issues. I'm extremely grateful to Dr. Avi Bary, the operating room team for their professionalism and attention. Honestly, I've never experienced such kind treatment in Russia. On the 5th day after the surgery, I could fly home. The kidney function has been fully preserved, no special diet is needed, and only limitation of physical activity for 1 month.

## CANCER TREATMENT

\* Ichilov Medical Center offers a series of medical tests aimed at prevention and early detection of cancer. Treatment strategy is selected according to the cancer type and severity, presence or absence of metastases, and the unique characteristics of each patient. Our world-class specialists are expert in treating many different types of cancer in adult and pediatric patients, including: breast cancer, brain

tumors, lung cancer, gastric cancer, head and neck cancer, esophageal cancer, orthopedic oncology, skin cancer, bladder cancer, prostate cancer, vaginal cancer, uterine cancer, cervical cancer, testicular cancer, ovarian cancer, blood cancer and more. Our unique experience in treating children with various forms of cancer allows us to work wonders in curing our young patients.

## SURGICAL DEPARTMENTS

\* Ichilov Hospital uses cutting-edge surgical technologies for a wide variety of surgical interventions in adult and pediatric patients, including complex cancer surgeries, cardiovascular surgery, chest and heart surgery, brain and cranial base surgery, urinary tract surgery, head and neck surgery, spinal surgery and organ transplantations.

At Ichilov, we use the Da Vinci System – a robotic surgical system. The system uses a minimally invasive surgical approach, helping to avoid large cuts and minimizing side effects. Our surgeons closely collaborate with every other department of the hospital, to create a personalized diagnostics and treatment plan for each individual patient.
