Preventing blindness with precision techniques and equipment
Senior citizens are the hardest hit by cataracts, the world’s number-one cause of blindness. At a time when their vision is so essential, seniors can find that cataracts hinder their mobility, threaten their safety and degrade their quality of life.

Perfecting the procedure, perfecting sight
Femtosecond laser-assisted cataract surgery can help restore patient sight with more accuracy and effectiveness and with less damage to the cornea than other technologies or manual procedures. In the hands of master Medical Center ophthalmologists, this next-generation laser tool will help the 1,900 patients who undergo cataract surgery each year in hope of returning to activities as basic as reading and writing.

Laser Technology for Treating Cataracts

You can help 1,900 patients every year with the purchase of the femtosecond laser-assisted cataract surgery system.
