who are reaching new levels of life expectancy also
return frequently to the hospital, the last place they
want to be. The multidisciplinary internal medicine
teams, whose members are sought out nationwide
for their clinical expertise, work heroically to treat
patients and restore them to health.

Giving patients space for comfort and privacy
Unfortunately, the number of hospital rooms and
equipment available to support the senior population
has not kept up with the need even though it is part
of the largest internal medicine service in Israel. The
Medical Center, which bears the heaviest burden of
care for senior citizens and Holocaust survivors in
Israel, is in dire need of expansion.

Two new hospital wings focused on patients’
best interests
Patients in the new internal medicine units will have
state-of-the-art services at their fingertips and timely
resources for collaborative care. Patients and their
guests will have adequate space for spirit-lifting,
wellness-boosting visits.

All efforts will concentrate on patient recovery and a
smooth, healthy transition back home to their families
in order to break the cycle of repeated hospital
admissions.

Space for respect:
Acute care for adults,
many of them senior citizens

Most patients hospitalized in Internal Medicine care
are likely someone’s beloved parent, grandparent or
great-grandparent. This is because at least 80 percent
of patients undergoing care for adult diseases such
as cardiovascular, gastro-intestinal or neurological
conditions, are over age 65 and often have health
problems and complex chronic conditions requiring
hospitalization. To add insult to injury, older adults
