Many parents-to-be fear for the health of their unborn babies due to potential genetic flaws. Sharing similar concerns, many patients face uncertain chances of survival due to cancer or hereditary diseases because of a microscopic defect in their DNA.

The Genetics Institute: Leading the charge to stop the tragedy of genetic diseases

The Genetics Institute, with its global reputation, helps patients and physicians navigate these unknowns with individualized insights into their genetic makeup. The institute advises parents on family planning, consults with medical teams on the way genetics affect cancer, degenerative disorders and hereditary conditions and develops solutions to treat and prevent debilitating and fatal diseases.

Expanding the Genetics Institute: Room for tests, consultations and research

The new facility is designed to give patients of all ages and life stages privacy and support in a comfortable setting as they face the most challenging decisions of their lives.

The institute’s state-of-the-art laboratories will be pivotal in finding next-generation solutions in specialties such as oncology, neurology, endocrinology and gastroenterology. The expansion will give expert geneticists room to unravel the secrets of our genetic code so that tiny mutations in patients’ DNA will no longer have such a devastating impact on their lives.

Giving people the chance to revise their medical destiny

Many parents-to-be fear for the health of their unborn babies due to potential genetic flaws. Sharing similar concerns, many patients face uncertain chances of survival due to cancer or hereditary diseases because of a microscopic defect in their DNA.
